Photo model: public function photo_tags() { return $this->belongsToMany(PhotoTag::class); } PhotoTag model: public function photo_attributes() { return $this->belongsToMany(PhotoAttribute::class); } PhotoAttributes model: public function tags() { return $this->belongsToMany(PhotoTagAttribute::class); } And PhotoAttributes model: public function attribute() { return $this->belongsToMany(Attribute::class); } I try to get photo and photo attributes with this query: $photos = Photo::with('photo_tags', 'photo_attributes', 'attributes') ->where('image_title', $image_title) ->where('image_description', $image_description) ->where('image_public', $image_public) ->get(); I think that this is not a good query.
